# WEATHER SYNOPSIS BY REGION

## **NORTHERN CALIFORNIA**

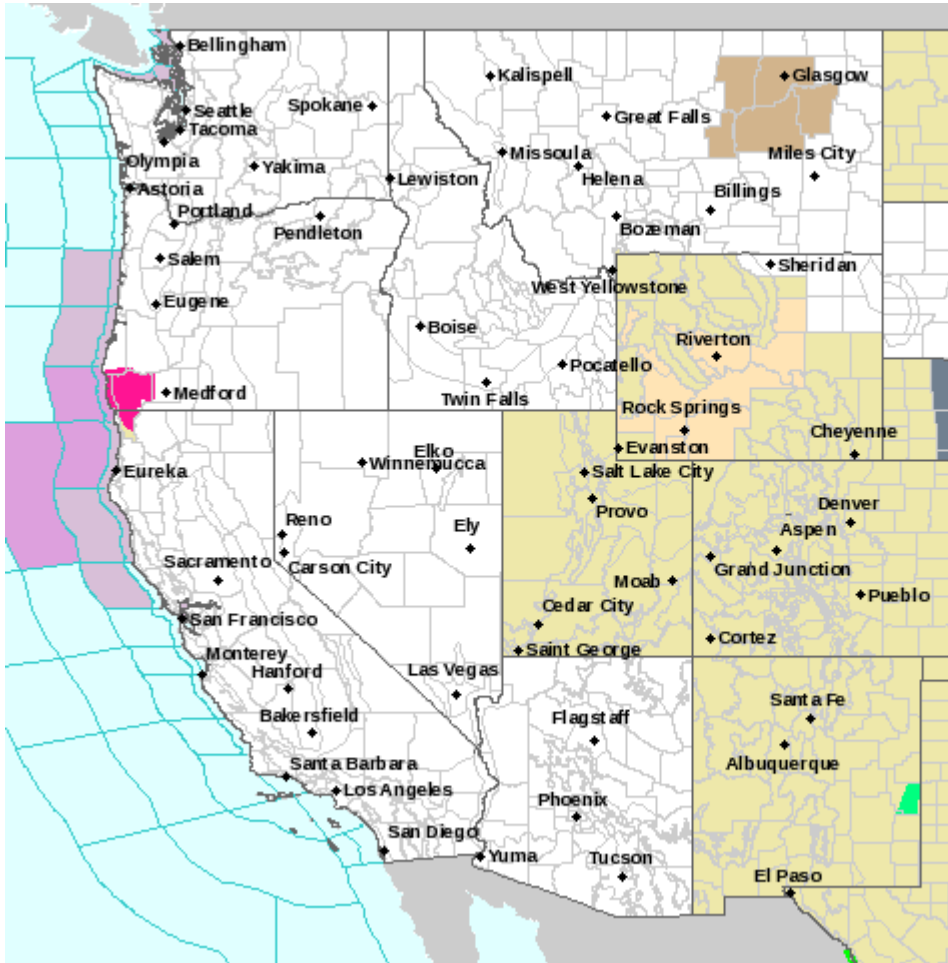

Clear skies across interior Northern California early this morning other than a few high clouds across the far northern portion of the state and some stratus extending locally inland from the coast. Current temperatures range from the 40s in the mountain valleys to the upper 50s to around 70 across the Central Valley and Sierra thermal belts. Little change expected the next several days with warm and dry conditions continuing with temperatures around 5-10 degrees above average. The marine layer has deepened slightly to around 2k feet, and onshore gradients have tightened a bit, so highs may be down a bit today in the Delta and locally across the Sacramento region. Potential for convection (transport of heat and moisture by the movement of a fluid) exists in the Sierra south of Tahoe into mid-week, but will likely be quite isolated and limited to the late-day hours.

## **SOUTHERN CALIFORNIA**

Low clouds have spread into the inland valleys. Elsewhere skies are clear. Onshore surface pressure gradients weakening with light winds across most of the forecast area, with gusts near 25 mph through the San Geronio Pass. The marine layer should remain deep through Wednesday with low clouds extending into the inland valleys. Locally gusty southwest to west winds will develop in the mountains and deserts each afternoon and evening. Weak easterly mid-level flow and marginal moisture may contribute to cumulus cloud development over the mountains each afternoon.
